Summer Internship Opportunity

Juno Therapeutics, a Celgene company, is a clinical-stage company developing novel cellular immunotherapies based on two distinct and complementary platforms – Chimeric Antigen Receptors (CARs) and T Cell Receptors (TCRs) technologies. Our goal is to revolutionize medicine by re-engaging the body’s immune system to treat cancer.

Juno is currently recruiting for rising juniors, seniors, or those in master's programs in bioengineering, chemical engineering, or biology for internships in our Cell Therapy Development & Operations organization. Students may contact me directly for more information at julie.shi@junotherapeutics.com.
