Dr. Darcy G. Gordon is an Instructor of Blended & Online Learning Initiatives in the Department of Biology, and former postdoctoral associate here at MIT. Dr.

Gordon will discuss how her lived experiences at the intersections of privilege and marginalization, specifically gender, race, and disability, have influenced her navigation of higher education and current work in digital learning. She will explore the ways her experiences in academia have shaped her as a scientist-educator and have led to the alignment of her efforts in digital education and inclusive teaching at MIT.
